

Activity: Creating a stakeholder analysis matrix

Step 1: Define the objectives of the workshop

Workshop Objectives:

Objective 1: Identify key business processes impacted by the SAP S/4HANA implementation.

Objective 2 (**Data Standardization**): Define and reach a consensus on unified data standards for customers and products across Sales, Product Development, and Support departments by the end of the session to eliminate fragmented data.

Objective 3 (**Efficiency Alignment**): Identify and document at least five specific automation requirements that will reduce manual data entry and improve response times within the sales order cycle.

Objective 4 (**Customer Experience**): Map the end-to-end customer interaction journey to identify integration points required for a consistent customer experience across all touchpoints.

Step 2: Design Engaging Activities to Facilitate Requirements Gathering

Activity 1: Process Mapping

- **Description:** Process mapping is a technique used to visually represent the current state of a business process. Stakeholders from sales, customer support, and IT collaborate to draw a diagram of the current process, including all steps and decision points. This can be done using whiteboards or digital tools.
- **Expected Outcomes:** Innit-Tech can identify bottlenecks and inefficiencies. This reveals gaps in the current system and highlights requirements for the new SAP S/4HANA system, such as preventing duplicate data entry.

Activity 2: User Stories & Pain Point Identification

- **Description:** Participants write "User Stories" from the perspective of their roles (e.g., "As a Support Agent, I need a single view of customer history so that I can provide consistent answers"). Participants then use red stickers to mark "Pain Points" on the existing process maps created in Activity 1.

- **Expected Outcomes:** A prioritized list of user-centric requirements that directly address the most critical frustrations of the staff.

Activity 3: Future State Prototyping

- **Description:** Using low-fidelity sketches or digital mockup tools, teams design the "ideal" screen layout or workflow for a specific task (e.g., launching a new product) in the future SAP S/4HANA system.
- **Expected Outcomes:** Visualization of the desired user experience and clarification of functional requirements for the development team.

Step 3: Develop a Detailed Workshop Agenda

Workshop Title: SAP S/4HANA Requirements Gathering Workshop **Date:** [Insert Date] **Location/Platform:** Innit-Tech Headquarters - Conference Room A **Participants:** Sales Director, Support Manager, Product Lead, IT Architect, and Key Users

Time	Activity	Materials
9:00 AM - 9:15 AM	Workshop Introduction and Objectives	Presentation slides
9:15 AM - 10:45 AM	Activity 1: Process Mapping (Current State)	Whiteboards, Markers, Digital Flowchart Software

10:45 AM - 11:00 AM	Morning Break	-
11:00 AM - 12:30 PM	Activity 2: User Stories & Pain Points	Sticky Notes (Red/Green), Story Templates
12:30 PM - 1:30 PM	Lunch Break	-
1:30 PM - 3:00 PM	Activity 3: Future State Prototyping	Prototyping Templates, SAP Fiori UI Guidelines
3:00 PM - 3:15 PM	Afternoon Break	-

3:15 PM - 4:30 PM	Requirements Prioritization (MoSCoW)	Voting Dots, Prioritization Matrix
4:30 PM - 5:00 PM	Wrap-up, Feedback, and Next Steps	Feedback Forms
