Role: SAP Business Analyst Candidate

ProTech Industries – SAP S/4HANA

Procurement

Traceability Matrix & Impact Analysis

1. Requirements Analysis

1.1 Business Requirements

BR-01: Automate Purchase Order Approvals

The system shall automate the routing of purchase orders based on predefined workflows to reduce delays and improve efficiency.

BR-02: Improve Supplier Management

The system shall provide tools to track supplier performance and reduce disputes.

BR-03: Reduce Manual Approvals

The system shall minimize manual intervention in the purchase order approval process.

BR-04: Enhance Reporting and Visibility

The system shall provide comprehensive reporting capabilities for better monitoring and decision-making.

1.2 Functional Requirements

FR-01: Purchase Order Workflow Configuration

The system shall allow configuration of approval workflows based on criteria such as purchase order amount, supplier, material type, and cost center.

FR-02: Automated Approval Notifications

The system shall notify approvers automatically via SAP Fiori and/or email when approval is required.

FR-03: Supplier Performance Tracking

The system shall track supplier KPIs such as delivery time, quality, and invoice accuracy.

FR-04: Supplier Dispute Management

The system shall provide functionality to record and manage supplier disputes.

1.3 Requirement Relationships

Requirement	Design Approach	Test Strategy	System Support	Status
BR-01	Workflow Design	Approval SLA Testing	SAP Flexible Workflow	In Progress
BR-02	KPI Dashboard Design	KPI Accuracy Testing	SAP Fiori Analytics	Planned
BR-03	Process Optimization	Manual vs Automated Testing	SAP MM	Planned
BR-04	Reporting Design	Report Validation Testing	SAP Analytics	Planned
FR-01	Workflow Configuration	Workflow Scenario Testing	S/4HANA MM	In Progress
FR-02	Notification Setup	Notification Testing	SAP Fiori	Planned
FR-03	KPI Data Model	Data Accuracy Testing	CDS Views	Planned

FR-04	Dispute Process Design	Dispute Resolution Testing	Supplier Management	Planned
-------	------------------------	----------------------------	---------------------	---------

2. Traceability Matrix

Req ID	Description	Design Document	Test Case	System Component	Status
BR-01	PO Automation	Workflow Design Document	TC-01 Approval SLA	SAP Flexible Workflow	In Progress
BR-02	Supplier Management	KPI Dashboard Document	TC-02 KPI Accuracy	SAP Fiori	Planned
BR-03	Reduce Manual Approvals	Process Optimization Document	TC-03 Efficiency Test	SAP MM	Planned
BR-04	Reporting & Visibility	Reporting Design Document	TC-04 Report Validation	SAP Analytics	Planned
FR-01	Workflow Configuration	Configuration Specification	TC-05 Workflow Test	S/4HANA MM	In Progress
FR-02	Notifications	Notification Design Document	TC-06 Notification Test	SAP Fiori	Planned
FR-03	Supplier KPI Tracking	CDS Design Document	TC-07 KPI Test	CDS Views	Planned
FR-04	Dispute Management	Dispute Design Document	TC-08 Dispute Flow	Supplier Management	Planned

3. SAP Solution Manager Traceability

3.1 Navigation Steps

- Log in to SAP Solution Manager
 - Navigate to:
Focused Build → Business Analyst → Requirements Management
-

3.2 Linking Requirements

- Select a requirement
- Assign a Work Package
- Link the requirement to:
 - Design documents
 - Development objects
 - Test cases

Work Packages are used to break requirements into:

- Configuration tasks
 - Development activities
 - Testing assignments
 - Change requests
-

3.3 Traceability Capabilities

- Requirement to Work Package linking
 - Requirement to Test Case mapping
 - Attachment of related documents
 - Export traceability reports to spreadsheet
-

3.4 Summary

SAP Solution Manager enables:

- End-to-end traceability

- Requirement lifecycle tracking
 - Efficient impact analysis
-

4. Change Request & Impact Analysis

4.1 Selected Requirement

FR-01: Purchase Order Workflow Configuration

4.2 Proposed Change

Introduce a new rule:

“Purchase orders above \$50,000 require CFO approval.”

4.3 Impact Analysis

Impact Area	Description
Design Documents	Workflow logic must be updated
System Configuration	New approval step must be configured
Test Cases	New test scenarios must be created
User Roles	CFO must be added as approver
Process Flow	Approval time may increase

4.4 Traceability Impact

FR-01 → Workflow Configuration

→ Test Case TC-05

→ SAP MM Workflow

4.5 Conclusion

Traceability ensures:

- Controlled change management
 - Clear visibility of dependencies
 - Reduced implementation risk
-
